- Production and wholesale of consumer goods: automobiles, motorcycles;
- Business of materials, machinery, equipment, transport vehicles for industrial and agricultural sectors (excluding pesticides and veterinary medicines), transportation.

2 . Accounting policies applied at the company

2.1 Accounting period, currency used in accounting

The accounting year starts from January 1st and ends on December 31st each year.

The currency used for accounting records is Vietnamese Dong (VND).

2.2 Accounting Standards and Accounting Policies Applied

Accounting policies applied

The company applies the Accounting System for enterprises issued under Circular No. 200/2014/TT/BTC dated December 22, 2014, by the Minister of Finance.

Statement of Compliance with Accounting Standards and Accounting Policies

The company has applied the Vietnamese Accounting Standards and the guiding documents issued by the State. The financial statements are prepared and presented in accordance with the requirements of each standard, the circulars guiding the implementation of the standards, and the applicable accounting policies.

Accounting Method Applied

The company applies the computerized accounting method.

2.3 Basis of Preparation of Financial Statements

The financial statements are presented on the basis of historical cost.

The company's financial statements are prepared based on the aggregation of transactions and events that occur and are recorded in the accounting books at the dependent subsidiaries and at the company's headquarters.

In the company's financial statements, intercompany transactions and balances related to assets, liabilities, and internal receivables and payables have been eliminated.

2.4 Financial Instruments

Initial recognition

Financial assets

The company's financial assets include cash and cash equivalents, receivables from customers and other receivables, loans, and both short-term and long-term investments. At the time of initial recognition, financial assets are determined at purchase price or issuance cost, plus any other directly related costs incurred in the purchase or issuance of the financial asset.

Financial liabilities

The company's financial liabilities include loans, payables to suppliers and other payables, and accrued expenses. At the time of initial recognition, financial liabilities are determined at the issuance price, plus any costs directly related to the issuance of the financial liabilities.

Subsequent measurement

Currently, there are no regulations regarding the revaluation of financial instruments after initial recognition.

2.5 Cash and Cash Equivalents

Cash and cash equivalents include cash on hand, bank deposits, short-term investments with a maturity of no more than three months, high liquidity, and the ability to be easily converted into a known amount of cash with minimal risk of change in value.

2.6 Receivables

Receivables are presented in the financial statements at the book value of customer receivables and other receivables, after deducting provisions for doubtful debts.

Provisions for doubtful debts are made for each individual receivable based on the overdue age of the debts or the estimated potential losses that may occur.

2.7 Inventory

Inventory is valued at cost. If the net realizable value is lower than the cost, inventory is valued at net realizable value. The cost of inventory includes purchase costs, processing costs, and other directly related costs incurred to bring the inventory to its current location and condition.

Inventory of raw materials is accounted for using the perpetual inventory method. The value of raw materials, tools, and equipment in inventory at the end of the period is accounted for using the specific identification method.

The work-in-progress costs at the end of the year are determined for each project and construction item (CT, HMCT) as follows:

*For projects that have not completed any construction volume during the period, the following applies:

Work-in-progress production costs	Work-in-progress production costs		Work-in-progress production costs
at the end of the period for	= at the begin of the period for	+	incurred during the period for
each project and construction item	each project and construction item		each project and construction item

* For projects and construction items with recognized revenue

WIP production costs	WIP production costs	WIP costs incurred during	Standard cost
at the end of the period for	= at the begin of the period for	+ the period for each	- for each project,
each project and construction item	each project and construction item	project, construction item	construction item

In Which:

The standard cost of a project or construction item is temporarily calculated as follows:
Temporary revenue of each project or construction item - Pre-tax income calculated for each project or construction item, which will be adjusted based on the final settlement figures approved by the competent authorities.

Inventory impairment provisions at the end of the year are established as the difference between the cost of inventory and its net realizable value when the cost exceeds the net realizable value.

2.8 Fixed Assets and Depreciation of Fixed Assets

Tangible fixed assets and intangible fixed assets are recognized at cost. During usage, tangible fixed assets and intangible fixed assets are recorded at original cost, accumulated depreciation, and remaining value.

Depreciation is calculated using the straight-line method. The estimated depreciation periods are as follows:

- Buildings and structures 05 - 30 years
- Machinery and equipment 03 - 06 years
- Transport vehicles 06 - 08 years
- Office equipment 03 - 05 years
- Other assets 03 - 05 years

- Management software 03 years

2.9 Investment Properties

Investment properties are recognized at cost. During the holding period for appreciation or for rental purposes, investment properties are recorded at original cost, accumulated depreciation, and remaining value.

Investment properties are depreciated using the straight-line method, with the estimated depreciation periods as follows:

- Buildings and structures 03 - 30 years

2.10 Financial investments

Financial investments at the reporting date, if:

- Treasury bills, promissory notes, and bank deposits with a maturity date or redemption period of no more than 3 months from the date of purchase are classified as 'cash equivalents';
- Investments with a recovery period of less than 1 year or within one operating cycle are classified as current assets;
- Investments with a recovery period longer than 1 year or more than one operating cycle are classified as long-term assets;

An impairment provision for investments is recognized at the end of the year as the difference between the book value of the investments recorded in the general ledger and their market value or fair value at the time of making the provision

- For securities investments: if the securities are listed, the market value is determined based on the average transaction price on the day of the provision on the Hanoi Stock Exchange (HNX) or the closing price on the day of the provision on the Ho Chi Minh City Stock Exchange (HOSE); if the securities are not listed on the stock market, the market value is determined based on the average transaction price on the trading market of unlisted public companies (UPCom) on the provision date or the average price based on transaction prices provided by at least three securities companies at the time of provision. If the market value of the securities cannot be determined, the company will not make an impairment provision for the securities. For listed securities that have been delisted or suspended from trading from the sixth trading day onwards, the market value is the book value as of the most recent balance sheet date.
- For long-term investments in other economic entities: the provision amount is determined based on the financial statements of the other economic entities.

2.11 Borrowing Costs

Borrowing costs are recognized as an expense in the period in which they are incurred, except for borrowing costs directly related to the construction investment or production of work-in-progress, which are capitalized into the value of the asset when the necessary conditions are met.

Borrowing costs directly related to the construction investment or production of work-in-progress that requires a long enough period (over 12 months) to be ready for use as intended or for sale are capitalized into the value of the asset. These costs include interest on loans, amortization of discounts or premiums on bond issuance, and other related costs incurred in the borrowing process.

2.12 Prepaid Expenses

Prepaid expenses related to production and business costs for a single financial year or an operating cycle are recognized as short-term prepaid expenses and are charged to production and business expenses in the financial year.

Expenses incurred during the financial year but related to the production and business results of multiple accounting periods are recorded as long-term prepaid expenses and are gradually allocated to the results of business activities in the subsequent accounting periods.

The allocation of long-term prepaid expenses to production and business costs in each accounting period is based on the nature and extent of each type of expense, selecting an appropriate allocation method and criteria. Prepaid expenses are gradually allocated to production and business costs using the straight-line method.

2.13 Accrued Expenses

Accrued expenses are costs that have not yet been incurred but are estimated and recognized as production and business expenses in the period to ensure that when the actual costs are incurred, they do not cause significant fluctuations in production and business expenses, based on the matching principle between revenue and expenses. When these costs are incurred, if there is a difference from the amounts previously accrued, the accounting department will adjust the expenses by adding or reducing them to reflect the difference.

Accrued expenses for projects are amounts payable to enterprises and construction teams based on the estimated costs of projects and construction items (CT, HMCT) that have confirmed the completed construction volume, with A-B settlements, but have not yet been approved by the investor and are temporarily recognized as revenue. Based on the temporarily recognized revenue, the company is currently making provisional accruals as follows:"

$$\begin{array}{rcl} \text{Accrued Expenses} & \text{Standard Cost of} & \text{Expenses with Original} \\ \text{for Each Project,} & \text{Project, Construction} & \text{Documentation Gathered for} \\ \text{Construction Item} & \text{Item} & \text{Each Project, Construction Item} \end{array}$$

2.14 Owner's Equity

The owner's investment capital is recognized based on the actual contributed capital of the owner.

Share premium is recognized based on the difference between the actual issuance price and the par value of the shares issued in the initial offering, additional issuance, or the reissuance of treasury shares. Direct costs related to the additional issuance of shares or the reissuance of treasury shares are deducted from share premium.

Other owner's equity is recorded based on the remaining value between the fair value of assets received by the company from other organizations or individuals as gifts, after deducting any taxes payable (if applicable) related to the gifted assets, and any additional contributions from business activities.

Treasury shares are shares issued by the company and later repurchased. Treasury shares are recorded at their actual value and are presented on the balance sheet as a reduction in owner's equity. The company does not recognize gains or losses from the purchase, sale, issuance, or cancellation of treasury shares.

Undistributed after-tax profit is the profit derived from the company's activities after deducting any adjustments due to retrospective application of changes in accounting policies and corrections of material errors from prior years. Undistributed after-tax profit may be distributed to investors based on their capital contributions after being approved by the General Meeting of Shareholders and after setting aside reserve funds in accordance with the company's charter and relevant Vietnamese laws.

Dividends payable to shareholders are recognized as a liability on the company's balance sheet after the declaration of dividends by the General Meeting of Shareholders."

Revenue Recognition

Sales Revenue

Sales revenue is recognized when the following conditions are simultaneously met:

- The majority of the risks and rewards associated with the ownership of the product or goods have been transferred to the buyer;
- The company no longer retains control over the goods as the owner or the ability to control the goods;
- The revenue can be reliably measured; Doanh thu được xác định tương đối chắc chắn;
- Economic benefits from the sale transaction have been or will be received;
- The costs related to The sale transaction can be determined..

Service Revenue

Service revenue is recognized when the outcome of the transaction can be reliably measured. In cases where the provision of services spans multiple periods, revenue is recognized in the period according to the portion of the work completed as of the balance sheet date for that period. The outcome of the service provision transaction is considered to be determined when the following conditions are met:

- The revenue can be reliably measured;
- The portion of the work completed as of the balance sheet date can be determined;

- There is a reasonable expectation of receiving economic benefits from the service transaction;
- The costs incurred for The transaction and The costs to complete The service provision transaction can be determined.

The portion of the service work completed is determined using the work completed method.

Financial Revenue

Revenue arising from interest, royalties, dividends, profits received, and other financial revenue is recognized when both of the following conditions are met:

- There is a reasonable expectation of receiving economic benefits from the transaction;
- The revenue can be reliably measured.

Dividends and profits received are recognized when the entity is entitled to receive the dividend or profit from the capital contribution.

Construction Contracts

Revenue

The basis for recognizing revenue is the value of the A-B settlement for completed and accepted projects or the confirmation of the construction volume completion in stages for projects with long construction periods. The recognized revenue is the settlement value of the project/phase acceptance (excluding VAT) that the company estimates it will receive. This value does not include materials provided by the investor and other basic construction costs carried out by the investor.

Any differences between the project settlement value approved by the investor and the revenue previously recognized in prior periods will be adjusted to increase or decrease revenue in the year when the settlement approval from the investor is received.

Expenses

For projects that have been completed, handed over, or settled by the investor, all accumulated costs for that project are transferred to determine the business result.

For projects with long construction periods, where revenue is recognized based on the construction volume completed and confirmed by the investor, the cost of goods sold to determine the business result corresponds to the volume of construction work completed

Recognition of Financial Expenses

The expenses recognized as financial expenses include:

- Expenses or losses related to financial investment activities;
- Loan and borrowing costs;
- Losses from exchange rate fluctuations on transactions involving foreign currencies;sinh liên quan đến ngoại tệ;
- provision for impairment of securities investments.

These items are recognized at the total amount incurred during the period and are not offset against financial income.

Taxes

Current Tax

Tax assets and liabilities for the current year and prior years are determined by the amount expected to be paid to (or refunded by) the tax authorities, based on the applicable tax rates and tax laws effective at the end of the tax period.

Total		20,699,207,251	46,145,627,832

Financial risk management

The Company's financial risks include market risk, credit risk, and liquidity risk. The Company has established a control system to ensure a reasonable balance between the cost of incurred risks and the cost of risk management. The Board of Directors is responsible for monitoring the risk management process to ensure a reasonable balance between risk and risk control.

Market Risk

The Company's business activities are primarily exposed to risks arising from changes in prices, exchange rates, and interest rates.

Price Risk:

The Company is exposed to price risk from equity instruments arising from short-term and long-term stock investments due to the uncertainty of future stock prices. Long-term equity investments are held for strategic long-term purposes, and at the end of the financial year, the Company does not plan to sell these investments.

Exchange Rate Risk:

The Company is exposed to exchange rate risk because the fair value of future cash flows from a financial instrument will fluctuate due to changes in foreign exchange rates when loans, revenues, and expenses are denominated in currencies other than the Vietnam dong.

Interest Rate Risk:

The Company is exposed to interest rate risk because the fair value of future cash flows from a financial instrument will fluctuate due to changes in market interest rates when the Company has deposits, with or without maturity, and loans or debt with floating interest rates. The Company manages interest rate risk by analyzing market competition to obtain favorable interest rates for its purposes.

Credit Risk

Credit risk is the risk that a party involved in a financial instrument or contract will be unable to fulfill its obligations, leading to a financial loss for the Company. The Company faces credit risk from its business activities (mainly from trade receivables) and financial activities (including bank deposits, loans, and other financial instruments).

	Up to 1 year	More than 1 year to 5 years	More than 5 years	Total

Total	106,767,183,869	0	0	106,767,183,869

Liquidity Risk

Liquidity risk is the risk that the Company faces difficulties in fulfilling its financial obligations due to a lack of funds. The Company's liquidity risk primarily arises from the differing maturity dates of its financial assets and financial liabilities.

The payment terms of financial liabilities are based on expected contract payments (on the basis of principal cash flows) as follows:

	Up to 1 year	More than 1 year to 5 years	More than 5 years	Total
	VND	VND	VND	VND
As of 31/03/2026
